

# e-TRIGGER

## SEAMLESS INTEGRATION

The e-Trigger is a perfect way to integrate third party devices into the e-loop ecosystem. The e-trigger is an ideal solution to eliminate wiring to gate motors and doors and will save many hours digging trenches across driveways. It's as simple as wiring in a 3 party device, wiring in the e-trans transceiver and then pairing the 2 devices and away you go, what is even better if you already have an e-loop installed the e-trigger can code into the same transceiver.

### Features

- Dual channel
- Waterproof housing with mounting bracket
- 12–24 VDC or 3V CR2045 battery power
- Opto-isolated protected input
- Range: up to 100m
- Frequency: 433.39MHz
